To whom it may concern:

I have been a consultant for BEMER, LLC for the past 8 years. BEMER is a medical device company that distributes a Pulsed Electromagnetic Field (PEMF) technology for use in medical practice and healthcare. My role with BEMER has been to support the research and development of their medical device as well as performing and facilitating research that supports the efficacy of its use.

I have operated in collaboration with many entities over the years and maintain contacts that were/are involved with past, present, and future projects. Sheila Hemphill and Coleman Hemphill have been instrumental in working with BEMER to initiate and foster relationships with key organizations to conduct research. They both have been involved with key projects. Two note worthy projects have been with Johnson Space Center (JSC)/NASA since 2012 and more recently (2106) with a research project working with five hospitals within the Texas Medical Center Community in Houston, TX.

The Hemphills' experience working with many innovative technologies and renowned international researchers has been, and continues to be, crucial to opening the door for medical advancements to improve health for people within both their local community and the nation. It has been both an honor and a pleasure to work along side such caring, passionate, and experienced people.

If you would like to speak with me directly, please feel free to contact me at my office.

Sincerely,

Joshua Berka NMD
