Subject: Sunset Review for Professional Geologists in Texas
Importance: High

Sunset Commission:

I am a registered PE (41970) in the state of Texas and I wish to offer my support for maintaining registration of geologists in Texas. I have worked with Professional Geologists (PG) for the last 40 years and consider their contribution to projects as critical. By having a PG involved in the project it assures that a well; for drinking water, remediation, or monitoring; will be installed properly. Additionally when determining the geology and hydrology of a property, it is critical to have a PG directly involved in the effort.

When you hire a consulting firm to provide any type of geological work, it is important to know that a PG will be involved as this provides confidence that the work will be done professionally.

Thank you for providing a method for me to show my support for Texas keeping the registration of geologist in place.

Gene Meyer, P.E., R.E.M.
Project Manager
Environmental Remediation
