Your Comments About the Staff Report, Including Recommendations Supported or Opposed:

I am surprised about this whole idea. We under the NBRC believe in what we have gone to school for.

Jumping in decision before evaluation of the entire situation calls for scrutiny.

As a Respiratory Practitioner I earned the degree in respiratory care, I do not have to be told when to step in : instincts - we know our staff and we want to keep it that way. The other team players already have their plates full almost unable to cope with the work load what is the point of all these confusion.

Respiratory is a very special area and level of care administration - it's ok to think , but there is need think of the causations - "Our concerned as practitioners is the quality of care to our precious customers at the end of the day". When making decisions to cut down on any kind of supporting unit there is need to think of our surrounding and judge - believe me or not -there are those that cannot do without quality respiratory care. Take a pic and remember. We have gone to college like any other professions do and as a practitioner I am ready to stand with the rest to protect our great ground of respiratory care with all its baggage that makes what we are to keep us the best of the care givers wherever we are: be it single,small, medium or extremely large organizations - Respiratory is a unique art many do. not understand us, but those who do, have and know what it means to be able to breathe may have something to say.

Let the Respiratory governing bodies be supported in a big way, we need every bit of governing that supports our growth in our areas of service.

Any Alternative or New Recommendations on This Agency: Be positive the sigma six approach may help - because this approach believes in quality and customer satisfaction. Respiratory believe in quality.
